SUMMARY

Junior backend developer and Origetec's sole developer since 05/2026: built and run, end to end, the internal management platform used by 20+ people across sales, purchasing, field service and production planning (Python, Django, PostgreSQL). Focused on applied AI: LLM-based quote extraction and MCP servers that give AI agents audited access to the platform and the ERP. Contributor to timezonefinder (5M downloads/month).

EXPERIENCE

Mid-level AI Integration Developer (Full-Stack) — Origetec, Araquari/SC, Brazil 10/2026 – Present
AI Integration Developer Trainee, promoted to Mid-level in 5 months 05/2026 – 10/2026

- Cut the time to issue a sales proposal from **about 4 hours to 10 minutes** by automating proposal generation; the system replaced spreadsheets and a legacy tool and has issued **100% of machine proposals** since Aug 2026.
- Eliminated manual price entry in supplier quotes (**300 prices** in a **60-item** quote sent to **5 suppliers**) by integrating the **Claude API**: suppliers upload PDF, spreadsheet or photo, the **LLM** extracts schema-validated data, the supplier reviews it and the buyer exports an xlsx for ERP import.
- Built two **MCP** servers, one on the management platform (**116 tools**, **OAuth 2.0**) and one on the ERP API, that let AI agents (Claude and ChatGPT) analyze ERP data and build quotes, proposals and sales orders with the user's own permissions; every write requires human confirmation and leaves an audit trail.
- Lead the ERP for Injepress, a foundry in the same group, in **Java 21**, **Spring Boot**, PostgreSQL and Next.js (**140+ pull requests**, foundation stage), designed AI-first: an **MCP** connector inside the API, tools generated from the API contract and **OAuth 2.1** (Spring Authorization Server), to run the ERP by talking to AI.
- Developed 4 internal systems (fleet, ideas board, portal and proposal generator) and merged them into **one platform** on **Django** and **Next.js**; the generator moved from an unversioned local **Streamlit** `.exe` to a hosted web application.
- Developed the REST API with **Django REST Framework** (**JWT**, service layer, **django-q2** queue) and designed the **PostgreSQL** schema with constraints; fixed duplicate proposal numbering before production with row-level locking (`select_for_update`).
- Built the read/write API for the Prosyst ERP in **FastAPI** (**400+ tests**), with dry-run and confirmation for writes, without exposing the database or credentials to internal systems.
- Set up CI/CD on **GitHub Actions** (**4,000+ tests**, **600+ pull requests**, **Docker** images to GHCR) and run production with Docker Compose, Nginx, Cloudflare Tunnel, **Sentry** and an in-house observability dashboard: **99.9%+ request success rate** and **p95 latency under 250 ms**.

Industrial Apprentice (Logistics) — Tupy, Joinville/SC, Brazil 03/2026 – 05/2026

PROJECTS

Racha API — REST API for sports court booking github.com/hemkdev/racha-api

- Production API (racha.hemk.dev/api/docs) in Django REST Framework and PostgreSQL, with OpenAPI, JWT, constraints against double booking and CI (lint, tests, Docker build) required for merge.

Tino — conversational personal finance bot github.com/hemkdev/Tino

- Discord bot in production built in **Java 25** without a framework (JDA, PostgreSQL, Flyway): channel-independent core, money as integer cents, every query scoped to the account and **200+ tests** against a real PostgreSQL in CI; release-based deploy to a VM with daily encrypted backups.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, JavaScript, PHP
Applied AI: LLM APIs (Claude), structured output, MCP, tool use, AI agents (Claude Code)
Backend: Django, Django REST Framework, FastAPI, Spring Boot, REST APIs, JWT, OAuth 2.0, OpenAPI
Databases: PostgreSQL, MySQL, relational modeling, migrations, transactions, concurrency control
Testing & DevOps: pytest, TDD, unit and integration testing, Docker, CI/CD, GitHub Actions, Linux, Git
Front-end: React, Next.js, TypeScript | **Languages:** Portuguese (native), English (C1, EF SET 68/100)

EDUCATION

B.Sc. in Software Engineering — Católica SC, Joinville/SC 02/2026 – 12/2029
Technical Degree in Systems Development — SENAI, Joinville/SC 02/2024 – 12/2025
